                                                        A method has been developed for detecting hepatitis E virus (HEV) antibodies (Ab). The method comprises: (a) reacting a serum sample with a HEV peptide antigen, and (b) examining the peptide for the presence of bound Ab, where the presence of bound Ab indicates the presence of HEV Ab. The present sequence encodes the protein from the open reading frame, ORP2, from HEV Mexico strain. The method can be used to diagnose infection with the enterically transmitted non-A/non-B viral hepatitis agent HEV, specifically the HEV Burma and Mexico strains. The peptides can be used in vaccines to prevent infection by HEV. The antibodies can neutralise and block HEV infection and can be used to prevent or treat HEV infection. The peptides and antibodies can also be used as diagnostic reagents. (Updated on 25-MAR. 2003 to correct PN field.) (Updated on 24-OCT-2003 to standardise OS

The sequence from a Mexican strain of ET-NAMB virus is about 75 per cent identical to the ETI.1 sequence (see AAQ14410). The Mexican sequence was identified in a cDNA library made directly from a semi-purified human stool specimen collected from an outbreak of ET-NAMB in Telixtac. Screening was with a serum considered to have high titer anti-ET-NANB antibodies. Two closes were identified from a total of 60,000 screened. The sequence of these clones was subsequently localised to the 3' half of the viral genome by homology comparison to the Burma strain sequence (see AAQ14412). (Updated on 25-MAR-2003 to correct PA field.) (Updated on 25-field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ATGCGCCCTAGGCCTCTTTTGCTGTTGTTCCTCTTGTTTCTGCCTATGTTGCCCGCGCGCA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            5836
                                                                                                                                      The present sequence represents the composite Mexico strain sequence of enterically transmitted non A non B hepatitis virus (ETTANB) (hepatitis sequence) E virus (HEV). The specification describes an isolated protein which is specifically immunoreactive with antibodies present in individuals infected with HEV and encoded by a sequence contained in an open reading frame (ORF) of an HEV genome. The genome has a sequence that is more than 70% identical to the ORF1 sequence from Burma HEV isolate (AAV66321). The protein is used as a vaccine and a diagnostic probe for ET-NANB. (Updated on 25-MAR-2003 to correct PR field.) (Updated on 27-AUG-2003 to correct of field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence represents the composite sequence of the Mexico Strain of an enterically transmitted nonArons Wiral hepatitis agent (ET-NANB). The mucleic acid sequence may be used for identifying and sequencing the entire viral agent (also referred to as HEV), detecting ET-MANB in infected samples, e.g. by specific amplification of virusderived DNA sequences and for producing recombinant viral proteins for use in vaccines. The present invention describes a method for identifying a recombinant antigen immunoreactive with a hepatitis E virus (HEV)-induced antibody. The method comprises producing a polypeptide derived from an HEV genome, immunoreacting the polypeptide with an HEV-positive antiserum and selecting the polypeptide with an HEV-positive antiserum and selecting the polypeptide with an HEV-positive antiserum. The method is useful for reacts with the HEV-positive antiserum. The method is useful for identifying recombinant antigen immunoreactive with antibody induced by HEV. The enterically transmitted non-A/non-B hepatitis (ET-NANB (also known as HEV))-specific fragments are useful for identifying ET-NANB.

CC Known as HEV)-specific fragments are useful for identifying ET-NANB with genomic material in a patient sample, for the synthesis of polypeptides for use in immunoassays, and for identifying synthesis of polypeptides for use in immunoassays, and for identifying strain. The antiqens are especially useful in the preparation of vaccine against ET-NANB virus particles for use directly as antiviral agents, and to produce antiserum designed for pre- or post-exposure prophylaxis. The present sequence represente a specifically claimed HEV composite Mexican strain gene sequence for use in the present invention
                                                                                                                                                                                                                                                                                                                     Identifying recombinant antigen immunoreactive with antibody induced Depatitis E virus (HEV), for detecting HEV infection, comprises immunoreacting a polypeptide from an HEV genome with an HEV-positive
                                                                                                                                                                                                                                                                                                                                                                                                                  Claim 5; Col 69-76; 46pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         5656
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 5776
                                                                                                     The invention relates to an isolated DNA comprising the genome of an enterically transmitted nonA/nonB (ET-NANB) viral hepatitis agent (also preferred as HBV). The DNA sequences or their fragments are useful in preparing ET-NANB viral proteins and as probes for virus detection. These are particularly useful in diagnosing infection by an enterically transmitted agent (e.g. ET-NANB virus), as well as in vaccine production. The present sequence represents a Mexican strain composite ET-NANB viral
                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            240

The invention comprises a method for detecting the presence of enterically transmitted nonA/nonB hepatitis viral (HEV) agents in a sample and isolating HEV agents or nucleic acid fragments produced by the agent. The method utilises PCR - using bile from a human or cynomolgus monkey actively infected with HEV as a source of the agent. The method of the invention is used for detecting the presence of a viral agent in a sample of cultured cells infected with the agent and isolating enterically transmitted nonA/nonB HEV agents or nucleic acid fragments produced by the agent. The present DNA sequence was isolated from a Mexican strain of the Hepatitis E virus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     hepatitis

The invention relates to a protein derived from an enterically transmitted non-A/non-B viral hepatitis agent. The viral proteins are useful for detecting infection by the enterically transmitted non-A/non-B (ET-NANB/HEV) hepatitis viral agent. The proteins are also useful for producing vaccines for immunising an individual against HEV hepatitis viral agent. The DNA fragments are useful for identifying and sequencing the entire viral agent and for assaying the viral agent in an infected sample. The present sequence is used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                    New proteins derived from an enterically transmitted non-A/non-B (ET-NANB) viral hepatitis agent, useful for diagnosing ET-NANB infection and producing vaccines for immunizing an individual against ET-NANB hepatitis viral agent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    cccarcasacaramentercacasacanteracacacasaramentaracaca

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The sequence is that encoding Mexico strain hepatitis E virus (HEV) open reading frames ORF2 and ORF3. ORF2 encodes the putative capsid protein of the virus, this protein or peptide fragments of it may be used in a vaccine composition for immunising an individual against HEV. Antibodies raised against these peptides can also be used in such vaccines. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          105

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The hepatitis E virus (HEV) Mexico strain ORF-2 (AAT27108) codes for the putative capsid protein (AAR96090). PCR amplification of ORF-2 allows prodn. of capsid protein or of C-terminal regions of the capsid protein (see also AAR96092, AAR96094 and AAR96096) and expression in Spodoptera frugiperda SF9 insect cells using a baculovirus vector provides recombinant C-terminal regions (see also AAR96102 and AAR96104) useful as diagnostic reagents and in vaccines. The HEV Burma strain ORF-2 (AAT27107) may similarly be used. (Updated on 16-OCT-2003 to standardise OS field)

It is obtd. by PCR amplification of HEV Mexico ORF-2 (AAT27108). The amplified fragment is inserted into vector pGEX for prodn. 62K in E. coli cells. Expression of full-length ORF-2 in Sf9 insect cells using a baculovirus system also results in prodn. of 62K antigen, is comparison to bacterial expresses proteins, for use in HEV diagnostic assays, and also has excellent immunogenic properties.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence is the CDNA of the hepatitis E virus (HEV) strain SAR-55, which was implicated in an enterically transmitted non-A, non-B hepatitis in Pakistan. The protein encoded by the structural region of the virus (i.e. ORF-2), which is capable of forming HEV like particles, is useful for the detection of HEV antibodies (pref. 1gG or 1gM) in blod, plasma, sera, ocrebrospinal fluid, tissue, urine or pleural fluid. The protein, and anti-HEV antibodies generated using the protein, can also be used in vaccines for immunising an animal against HEV infection. The protein is identified as a band of greater than 50 kD following SDS-PAGE of cell lysates of insect cells infected with a HEV ORF-2 contg.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Submitted (02-JUN-1999) Genoscope - Centre National de Sequencage: BP 191 91006 EVRY cedex - FRANCE (E-mail: seqref@genoscope.cns.fr - Web: www.genoscope.cns.fr)

Determination of this BAC-end sequence was carried out as part of a collaboration of this BAC-end sequence was carried out as part of a collaboration of this Backeley Drosophila Genome Project (BDGP). The BGGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitlly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Gsoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of

Determination of this BAC-end sequence was carried out as part of collaboration with the Barkeley Drosophila Genome Project (BDGP).

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Gsoegawa and Aaron Mammoser in Pieter de Jongs laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Bufffalo, NY. The library is named RPCI-98 and was constructed by partial BCORI digestion of Drosophila Drosophi
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CNS0052P BACKLIP16 of RPCI-98 library from Drosophila melanogaster genome survey sequence TET3 end of BAC # BACKLIP16 of RPCI-98 library from Drosophila melanogaster (fruit

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    862
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      108 TACCGGCGGTGGTTTCTGGGGTGACCGGGTTGATTCTCAGCCCTTCGCAATCCCCTATAT 167
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial scorl digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; on bw sp, the same strain used for the BDGP from the and BST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Eukaryota, Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Primates; Catarrhin; Hominidae; Homo.

```
double-strand cDNA was digested with Not I and cloned into the Not I and EcoRV sites of the pCMVSPORT 6 vector. Library was not normalized."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            GSS 26-JUL-1999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Submission Submission Submission Submitted (23-JUL-1999) Genoscope - Centre National de Sequencage : BP 191 91006 EVRY cedex - FRANCE (B-mail : seqref@genoscope.cns.fr - Web: www.genoscope.cns.fr)
Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk - This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector
